## REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

The prior art of record fails to anticipate or make obvious the structure of a corner trimming device as claimed in claim 1, wherein the device includes a base with a seat and platform extending from the base, the seat includes a rounded corner edge. The base further includes a channel formed between the seat and the platform such that a bar portion of a blade is retained in the channel. The blade further includes an angle arm including an inner peripheral portion having a rounded corner edge for engaging the rounded corner edge of the seat. The device also includes a handle pivotally secured to the base and engaged with the angle arm for moving the blade.

The closest prior art references include Lin, U.S. Patent 6,016,733, Chang, U.S. Patent 6,736,045, Kim et al., U.S. Patent 6,209,434, Hagerty, U.S. Patent 4,611,519, Christie, U.S. Patent 2,163,868, and Andersen, U.S. Patent 2,082,867.

Lin discloses a corner-cutting device with a pivoting handle (40) engaged with a blade (45) that pivots into a lower blade (22) on sheet seat (14) and platform (11). However, Lin lacks the channel formed between the seat and the platform for retaining a bar portion of the moving blade, wherein the moving blade includes an angle arm with a rounded corner edge.

Chang discloses a corner-cutting device with a pivoting handle (72) for rectilinearly moving a blade toward a lower seat portion. However, Chang lacks the seat and platform configuration with a channel therebetween for engaging a bar portion

of the moving blade, wherein the moving blade includes an angle arm with a rounded corner edge.

Kim et al. discloses a typical decorative hold punch but lacks the seat and platform arrangement with a channel therebetween for engaging a bar portion of the moving blade, wherein the moving blade includes an angle arm with a rounded corner edge.

Hagerty discloses a corner forming device with a seat and platform but lacks the seat and platform configuration with a channel therebetween for engaging a bar portion of the moving blade, wherein the moving blade includes an angle arm with a rounded corner edge.

Christie discloses a corner-cutting device with a pivoting handle (23) for rectilinearly moving a blade toward a lower seat portion. However, Christie lacks the seat and platform configuration with a channel therebetween for engaging a bar portion of the moving blade, wherein the moving blade includes an angle arm with a rounded corner edge.

Anderson discloses a corner-cutting device with a rectilinearly moving handle (21) and blade (5) that moves toward a lower seat portion (3) and blade (4). However, Anderson lacks the seat and platform configuration with a channel therebetween for engaging a bar portion of the moving blade, wherein the moving blade includes an angle arm with a rounded corner edge.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
